

RWD uEmulate™

for SAP Store Systems

What is RWD uEmulate™?

RWD uEmulate™ is an interactive toolkit that revolutionizes the delivery of learning for SAP Store Systems point-of-sale system.

Retail organizations can quickly develop and deploy learning in a new medium that is meaningful and realistic to the point of sale system their associates use every day, by using RWD uEmulate's advanced XML rendering and innovative multimedia development capabilities.

RWD uEmulate™ is backed by RWD's 20 years of employee support experience. More than 1,200 companies worldwide use RWD's solutions to improve business productivity and enhance worker performance.

RWD uEmulate™ for Store Systems Components

RWD uEmulate™ for SAP Store Systems is an interactive learning delivery system that provides:

- Robust configuration options that allow our customer to rapidly deploy *meaningful* and *relevant* content
- Thirty standard *modular*, self-directed learning activities in a realistic system environment
- Performance support materials to *reinforce* the learning at the point of sale
- Companion guides for the store manager to help them *effectively coach* the learning for their employees

RWD uEmulate™ provides a single source of learning, practice, discovery and performance support in a single interactive tool that can be easily *branded, customized* and *translated*

The companion guides *reinforce* the learning or can be used as the main form of delivery

Emulation Contents

RWD uEmulate™ for SAP Store Systems includes the following components:

- A fully interactive **SYSTEM EMULATOR** that allows associates to learn and practice common store transactions in a safe environment
- Embedded **LESSON MODULES** that guides the associate through each transaction in a simple to follow format
- An integrated **HELP** function that includes the steps to complete each exercise transaction
- A built-in **FEEDBACK** mechanism to guide the associate through their exercises and coach them through each process
- A **FREE PLAY** mode where associates can explore the basic functions of the POS system
- A **TRACKING** mechanism that can provide progress and completion information to a host Learning Management System
